Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query

Lacture (18-AUG-1998) Yasukazu Nakamura, Kazusa DNA Research Institute, Departnent of Plant Gene Research; 1532-3 Yana, Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp, Tel: 81-438-52-3934)

Address for correspondence: kaos@kazusa.or.jp, Ror the latest information on annotation of this clone, please see http://www.kazusa.or.jp/kaos@cgi-bin/agd_graph.cgi?c=wxFl2 Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.orml.gov/Grail-1.33/, http://ccmaple.car.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.ar.de.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Genes encoding trans are predicted by transcan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, http://genome.wustl.edu/eddy/YRNAscan-SE/).
This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is K15E6 and the 3' clone is K3K3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /translation="mirhallifsilvstpivgegatstyeptdyftencgdtsnnvd

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDS
                                                                                                                                                                              e-mail for correspondence: arab@sequence.stanford.edu
Genes with similarity to proteins in the databases are described as
'putative', 'like' or 'similar to'. Genes that have EST
similarity but no significant protein similarity are described as
'unknown proteins'. Genes that are annotated based only on gene
prediction software are described as 'hypothetical proteins'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compblo.ornl.gov/section/index.html), GENSCAN (Chris Burge,
http://gnomic.stanford.edu/-chris/GENSCANW.html), Fexa (V.Solovyev
& A.Salamov, Sanger Centre, http://genomic.sanger.ac.uk/), and
NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark,http://www.cbs.dtu.dk/NetPlantGene.html).

http://www.kazusa.or.jp/kaos/cgi/bin/adg_graph.cgi/c=MO01
Genes with similarity to proteins in the databases are described in
'product' or 'note' qualiflers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/),
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
SplicePredictor (Volker Brendel, Stanford University,
http://www.cbs.dtu.dk/services/NetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://www.ini.achi.edu/chi.bin/sp.ggi).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /evidence=not_experimental

Genes encoding tRNAs are predicted by tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St. Louis,
http://genome.wustl.edu/eddy/tRNAscan-SE/).
This sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.
The 5' clone is Ti310 and the 3' clone is T26G12.
      Structural analysis of Arabidopsis thaliana chromosome 3. II. Sequence features of the 4,251,695 bp regions covered by 90 Pl, TAC and BAC clones
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EADFGWGRPVKVDIVSIDQGEAIAMAERRDESGGVEIGMCLKKTEMDSVVSFFNNGLH

* NOTE: This is a "working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will

2 (bases 1 to 136047)

                                                                                                                                                                                                                                            Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in AAT37308-T37313.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in AAT37308-T37313. NOTE: This sequence is supposed to cross reference with the protein described in AAW04727. Anowever there are so many discrepancies between the polypeptide decoded from this sequence and the polypeptide given in the specification and described in AAW04727 that the indexer decided
                                                                                                                                                                                                                                                                                                                                                          plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         plants
